Genomic Health Announces Favorable Draft Local Coverage Determination (LCD) on Medicare Coverage for Use of Oncotype DX® Genomic Prostate Score™ in Patients with Favorable Intermediate-risk Prostate Cancer

Once New LCD is Finalized, 80,000 Medicare Patients Total Will Be Eligible for Coverage

REDWOOD CITY, Calif., May 4, 2017 /PRNewswire/ -- Genomic Health, Inc. (Nasdaq: GHDX) today announced that Palmetto GBA, a Medicare Administrative Contractor (MAC) that assesses molecular diagnostic technologies, has issued a draft local coverage determination (LCD) for the Oncotype DX® Genomic Prostate Score™ (GPS). The draft LCD recommends Medicare coverage for use of the test in qualified patients with favorable intermediate-risk prostate cancer throughout the United States.

"This positive draft local coverage determination represents an important step toward ensuring that prostate cancer patients covered by Medicare have access to the unique biological information provided by Oncotype DX to more precisely assess both the current state and future risk of their cancer to better inform the management of their disease," said Phil Febbo, M.D., chief medical officer, Genomic Health.

Once the draft LCD on Medicare coverage for intermediate-risk patients is finalized, an estimated 30,000 additional men will have further access to the test to help them more confidently decide between active surveillance or immediate intervention. This adds to the existing 50,000 low-risk patients that have been covered by Medicare since 2015 and brings the total number of Medicare patients eligible for GPS coverage to 80,000.

The draft LCD is [posted](#) to the Medicare Coverage Database on the Centers for Medicare and Medicaid Services (CMS) website. It will go through Medicare's review process, which includes a public comment period, finalization and notification. Once final, LCDs are subject to annual review by the MACs and, as such, Genomic Health will continue to generate scientific data and publications to demonstrate enhanced clinical utility of the GPS.

About the Oncotype DX® Genomic Prostate Score™

Designed by Genomic Health based on results from multiple studies led by Cleveland Clinic and the University of California, San Francisco, the Oncotype DX Genomic Prostate Score analyzes 17 genes across four biological pathways from tumor tissue removed during biopsy to provide an individual score that, in combination with other clinical factors, further clarifies a man's risk prior to treatment intervention. The test enables confident treatment decisions to provide the opportunity for low- and intermediate-risk patients to avoid prostatectomy or radiation - and their side effects - while identifying men who need immediate definitive treatment. About Genomic Health

[Genomic Health](#), Inc. (NASDAQ: GHDX) is the world's leading provider of genomic-based diagnostic tests that help optimize cancer care by addressing the overtreatment of the disease, one of the greatest issues in healthcare today. With its Oncotype IQ® Genomic Intelligence Platform, the company is applying its world-class scientific and commercial expertise and infrastructure to lead the translation of clinical and genomic big data into actionable results for treatment planning throughout the cancer patient journey, from diagnosis to treatment selection and monitoring. The Oncotype IQ portfolio of genomic tests and services currently consists of the company's flagship line of Oncotype DX gene expression tests that have been used to guide treatment decisions for more than 700,000 cancer patients worldwide. Genomic Health is expanding its test portfolio to include additional liquid- and tissue-based tests, including the recently launched Oncotype SEQ® Liquid Select™. The company is based in [Redwood City](#), California, with international headquarters in Geneva, Switzerland.
